DILIP BUKKAMBUDHI GANESH

AI SOLUTIONS ENGINEER • GENERATIVE AI & RAG • MCP • MICROSOFT 365 • SALESFORCE • SERVICENOW • PYTHON
(804) 551-8521 • dilipbganesh0205@gmail.com • LinkedIn • Portfolio • Richmond, VA

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of hands-on experience **building, integrating, and operating production systems**, including **AI-enabled solutions**, and an M.S. in Computer Science (Virginia Commonwealth University). Designs, builds, and deploys **generative AI** workflows and automations using **Anthropic (Claude) and OpenAI** models, with **prompt engineering, orchestration logic, embeddings, and RAG patterns**. Integrates AI with **enterprise data sources, APIs, MCP servers, and SaaS platforms (Microsoft 365, Salesforce, ServiceNow)**, using **embeddings and vector databases** for retrieval, and owns **operational readiness**: monitoring, logging, performance tuning, and optimization. Working knowledge of AI risks (data security, privacy, model limitations, and cost) and of partnering with Security, Privacy, and IT teams on **governance, risk, and compliance (GRC)**.

TECHNICAL SKILLS

Generative AI: Anthropic (Claude, Claude Code), OpenAI (GPT-4, API), prompt engineering, orchestration logic, embeddings, retrieval-augmented generation (RAG), AI agents & workflows; LangGraph, LangChain
Enterprise SaaS: Microsoft 365 (Graph API, SharePoint, Teams, Copilot), Salesforce (REST/SOAP APIs, Apex, Einstein), ServiceNow (REST/Table APIs, ITSM, Now Assist)
Integrations & MCP: MCP (Model Context Protocol) server development & tool integration, REST APIs, webhooks, OAuth-based connectors, Apache Kafka, SSH/SFTP data ingestion
Embeddings & Retrieval: Embeddings, vector databases (Pinecone, pgvector, OpenSearch), semantic search, chunking & indexing strategies, RAG evaluation
Governance, Risk & Compliance: GRC for AI solutions, data security, privacy & PII handling, access control (JWT/OAuth, IAM, least privilege), audit logging, model limitations & hallucination mitigation, guardrails, LLM cost management
Operations & Reliability: Monitoring, structured logging & distributed tracing, performance tuning, retries & circuit breakers, runbooks, technical documentation, reusable implementation patterns
Engineering & Cloud: Python, Java, Spring Boot, Node.js, TypeScript, SQL (MySQL, MongoDB), Docker, OpenShift, AWS (EC2, S3), CI/CD, Git/GitHub, Agile/Scrum

PROFESSIONAL EXPERIENCE

Artificial Intelligence Intern — Springer Capital | Jul 2026 – Present • Remote
- Design, build, and deploy **AI-enabled solutions** for prioritized use cases, translating business requirements into working features integrated with production services and APIs.
- Use **Anthropic (Claude Code)** and LangGraph for prompt engineering, orchestration, and AI-assisted development, speeding up prototyping and debugging.

Machine Learning Engineer — Entropik | 2023 – 2024 • Bengaluru, India
- Built and deployed a **production generative AI workflow** (OpenAI API, LangChain, later orchestrated with LangGraph) that automated financial reconciliation onboarding, cutting an **8–10-week manual process to hours**.
- **Integrated the AI workflow with client systems of record** through a secure SSH/SFTP ingestion service with authenticated access, containerized with Docker and deployed on OpenShift.
- Ensured **data quality and accuracy** with fault-tolerant batch processing over thousands of records, isolating per-record failures so bad data never blocked a run.
- Owned **operational readiness**: added retry logic, circuit breakers, and structured JSON logging with distributed trace correlation for **monitoring**, auditability, and faster incident resolution.

Full Stack Engineer — Recro | 2021 – 2023 • India
- Built Java/Spring Boot **REST APIs and integrations** for concurrent multi-user enterprise services, reducing response latency.
- Designed and tuned MySQL schemas and queries across multiple services, improving **performance** and data integrity.
- Raised test coverage from ~40% to ~75% with 30+ JUnit tests in CI/CD, and cut post-release defects by ~30% with Cucumber/Gherkin end-to-end tests.

TECHNICAL PROJECTS

Enterprise Knowledge MCP Server | Python, MCP (Model Context Protocol), Salesforce API, RAG
- Built an **MCP server in Python** that lets AI assistants **search company documents** and **query Salesforce** records through standardized tools, combining **retrieval-augmented generation (RAG)** over internal documents with live CRM data to answer business questions in one conversation.
- Integrated Salesforce through authenticated API access, exposing only the scoped tools and data the assistant needed.

AI-Powered Debt Manager | Python, LangGraph, OpenAI API, Pandas
- Built a modular **AI orchestration** pipeline (ingestion, calculation, strategy, visualization) that generates personalized payoff plans; cut simulated interest costs by up to 22%.

ML-Driven Expense Intelligence | ReactJS, Node.js, MongoDB, REST API, JWT, Python
- Built a dashboard on a secured REST API (JWT); improved throughput ~35% through **performance tuning** after load-testing 50+ concurrent users with JMeter.

EDUCATION

M.S. in Computer Science — Virginia Commonwealth University, Richmond, VA | GPA 3.5+
Relevant Coursework: Software Engineering for AI-Enabled Systems, Machine Learning, Data Science, Human-AI Interaction

B.S. in Computer Science — CMR Institute of Technology

CERTIFICATIONS

Google AI Essentials (Google, 2026) • Python Certificate (Prepinsta, 2023)
