DILIP BUKKAMBUDHI GANESH

DATA REPORTING ANALYST ● SQL ● EXCEL ● RELATIONAL DATABASES ● DATA FILE ANALYSIS ● POWER BI ● TABLEAU ● DATA QUALITY

(804) 551-8521 • dilipbganesh0205@gmail.com • LinkedIn • Portfolio • Richmond, VA

PROFESSIONAL SUMMARY

Data reporting analyst with an **M.S. in Computer Science** (VCU) and 4+ years of **data file analysis, reporting and relational database work** in SQL, Python, **Excel**, Power BI and Tableau. Turns ad hoc data requests into accurate, published reports and dashboards, validates large data files record by record, and works as the liaison between data teams and the business partners who request the data. At Entropik, automated file-based financial reconciliation and cut an **8–10-week manual process to hours**.

CORE TECHNICAL SKILLS

Data & Databases: SQL, relational databases (MySQL, PostgreSQL), data modeling, MongoDB, Python (Pandas, NumPy), Scala, PySpark
Reporting & Files: Microsoft Excel (pivot tables, lookups, formulas), Outlook; ad hoc and recurring reports, data file analysis (CSV, flat files, Parquet), report publishing, report testing and validation
BI & Visualization: Tableau, Power BI, Looker, Amazon QuickSight, Matplotlib, React dashboards
Big Data & Cloud: Apache Spark, Apache Kafka, Ab Initio, batch and streaming ETL, AWS (S3, Lambda, EC2)
Data Governance & Quality: Data validation and reconciliation, data-quality checks, schema-drift and anomaly detection, audit trails, access control (IAM, OAuth)
Analytics: Statistical analysis, anomaly detection, regression and classification models, LLM/GenAI (LangGraph, Claude, OpenAI)

PROFESSIONAL EXPERIENCE

Springer Capital | Remote | Artificial Intelligence Intern | Jul 2026 – Present

- Build and maintain **Spark (Scala and PySpark)** and **SQL** pipelines on **AWS** (S3, Lambda, EC2) that ingest, clean and transform financial data for analytics and reporting.
- Build and publish **Tableau and Power BI reports** on pipeline outputs, and handle ad hoc data requests from business stakeholders, clarifying requirements so each report meets their needs.
- Apply **data-quality checks** and validation rules to pipeline outputs, and use Claude Code and Claude Skills to package reusable data-quality workflows; deploy jobs on Kubernetes.

Entropik | Bengaluru, IN | Machine Learning Engineer | Nov 2022 – Dec 2024

- Built and published **Power BI reports** on reconciliation data, tracking onboarding progress, match rates and data exceptions, and served as the **data liaison** between the engineering team and business and client stakeholders.
- Automated **financial reconciliation** onboarding by validating and mapping client financial data, reducing an **8–10-week manual process to hours**.
- Analyzed and validated client **data files** across **thousands of financial records**, isolating bad records so errors never blocked a run and every exception was traceable.
- Wrote **SQL** queries to analyze reconciliation data, investigate discrepancies and check data quality before results reached clients.
- Ensured **data accuracy and auditability** with a complete audit trail of every automated reconciliation decision, so any result could be traced and verified.

Recro | India | Data Analyst | June 2020 – Nov 2022

- Designed and optimized **relational MySQL** schemas and SQL queries across services, improving query performance and keeping data consistent across systems.
- Built **Apache Spark** jobs to process and aggregate application data, and **Tableau dashboards** to report usage and performance trends to stakeholders.
- Led **enhancement testing**: raised test coverage from **~40% to ~75%** with 30+ JUnit tests and cut post-release defects by **~30%** with end-to-end tests.

TECHNICAL PROJECTS

Healthcare Patient Management Workflow Automation — *Python, SQL, Excel*

- Worked directly with patients and care staff to map their day-to-day processes, then built **automated workflows** for a patient management system that replaced manual record-keeping and follow-up steps.
- Validated patient data for accuracy and built **Excel reports** to track workflow status and turnaround, handling patient information with care for privacy.

Cloud Data Pipeline for Financial Transactions — *Spark (Scala), SQL, AWS S3/Lambda, Kubernetes, Python*

- Built an end-to-end pipeline where transaction files landing in S3 trigger Spark (Scala) jobs that clean, deduplicate and aggregate data into partitioned Parquet tables, with data-quality checks that flag schema drift and anomalous records.

ML-Driven Expense Intelligence — *Python, Pandas, MongoDB, Node.js, React*

- Built a Python analytics layer that classifies spending and flags anomalous transactions, with a dashboard offering real-time filtering.

EDUCATION & CERTIFICATIONS

M.S. in Computer Science — Virginia Commonwealth University, Richmond, VA | GPA 3.5+ | Coursework: Data Science, Machine Learning
B.S. in Computer Science — CMR Institute of Technology | **Certifications:** Google AI Essentials (2026) • Python (Prepinsta, 2023)
