DILIP BUKKAMBUDHI GANESH

QA ANALYST ● SOFTWARE TESTING ● TEST PLANS & TEST CASES ● FUNCTIONAL, UI & INTEGRATION TESTING ● DEFECT TRACKING
(804) 551-8521 • dilipbganesh0205@gmail.com • LinkedIn • Portfolio

PROFESSIONAL SUMMARY

Detail-oriented engineer with an **M.S. in Computer Science** (VCU) and hands-on experience in **software testing**: writing test cases, running functional, integration, end-to-end and performance tests, and finding defects before they reach users. Currently a Quality Assurance Intern at Springer Capital, testing and debugging features in production services. Learns new tools quickly, documents work clearly, and works well with developers, operations and stakeholders.

CORE TECHNICAL SKILLS

Testing: Test planning, test case design and execution, functional, UI, integration, end-to-end, regression and cross-browser testing, load and performance testing
Test Tools: JUnit, Pytest, Jest, React Testing Library, Cucumber/Gherkin (BDD), Selenium, JMeter, Postman
Quality & Release: Defect reporting and tracking, SDLC, CI/CD pipelines, release validation, test documentation and checklists, Agile/Scrum
Data Analysis: SQL (MySQL, PostgreSQL), Python (Pandas), data validation, log analysis for issue investigation, Excel, Power BI
Development: Python, Java, JavaScript, TypeScript, React, Node.js, Spring Boot, REST APIs, Git/GitHub, Docker, Linux

PROFESSIONAL EXPERIENCE

Springer Capital | Remote | Quality Assurance Intern | Jul 2026 – Present

- Build and deploy AI-enabled features integrated with production services and APIs, turning business requirements from product and engineering teams into working, tested features.
- Write and run **unit and integration tests** (Pytest) for new features and API endpoints, and verify each change before it is released.
- **Validate AI outputs** against expected results, document incorrect or inconsistent responses with steps to reproduce, and work with developers to fix and re-test them.
- Investigate and help resolve **production issues** using logs, SQL queries and Claude Code, and document root causes and fixes for the team.
- Use LangGraph and prompt engineering to prototype AI workflows, and share test findings and status with product and engineering teams in regular check-ins.

TECHNICAL PROJECTS

Test Automation Suite for a Web Application — *Selenium, Cucumber/Gherkin, Postman, Jest, JUnit, CI/CD*

- Wrote a **test plan and test cases** covering UI, functional and API flows for a full-stack web app, and automated the regression suite with **Selenium** UI tests, **Cucumber/Gherkin** scenarios and **Postman** API tests.
- Ran the suite automatically on every build in a **CI/CD pipeline**, logged each defect with steps to reproduce, expected vs. actual results and severity, and re-tested fixes before release.
- Ran **cross-browser checks** on Chrome, Firefox, Safari and Edge, and kept a release checklist so each deployment was verified the same way.

ML-Driven Expense Intelligence — *React, Node.js, MongoDB, JMeter, JWT*

- **Load-tested the app with 50+ concurrent users** in JMeter, found 3 performance bottlenecks, and verified the fixes, **improving throughput ~35%**.

Real-Time Event Pipeline — *Apache Kafka, Node.js, MongoDB*

- Tested a fault-tolerant Kafka pipeline across repeated runs and confirmed **zero message loss** and ordered delivery.

Healthcare Patient Management Workflow Automation — *Python, SQL, Excel*

- Gathered requirements from patients and care staff, automated workflows for a patient management system, and **validated patient data for accuracy**.

AI-Powered Debt Manager — *Python, LangGraph, OpenAI API, Pandas*

- Built a modular multi-agent pipeline (ingestion, repayment calculation, strategy, visualization) that generates payoff plans, cutting simulated interest costs by **up to 22%**.

Enterprise Knowledge MCP Server — *Python, MCP, Salesforce API*

- Built and tested an MCP server that lets AI assistants search company documents and query Salesforce records, with access limited to scoped tools and data.

EDUCATION & CERTIFICATIONS

M.S. in Computer Science — Virginia Commonwealth University, Richmond, VA | GPA 3.5+ | Coursework: Software Engineering for AI-Enabled Systems
B.S. in Computer Science — CMR Institute of Technology | **Certifications:** Google AI Essentials (2026) • Python (Prepinsta, 2023)
